TREND ANALYSIS

LEGEND

- [1]** Credit Information Score: By monitoring seven critical factors from our database, this score has proved to be a reliable indicator of risk. Scores over 20, or any marked increase in score, represent risk levels of concern. Scores over 30 represent extreme risk that warrant immediate attention.
- [2]** Performance Summary: This section tells you how long the company has existed in our database, and how they are paying their bills, based on current trade lines.
- [3]** Legal and Other Information: Most companies are quick to volunteer positive information about themselves. Negative occurrences like NSF cheques, third party collections and legal items are the information you need to know about. The frequency, size and time of these events are warning flags that must not be overlooked.
- [4]** Trend Analysis: This is your crystal ball pointing to the future. Often, future problems show in our trend analysis before the scores reach caution levels. Additionally, marketing opportunities can show up here. The trend analysis will highlight both future risks and opportunities.
